

## QUIZ- PROKARYOTIC, EUKARYOTIC, PLANT AND ANIMAL CELLS

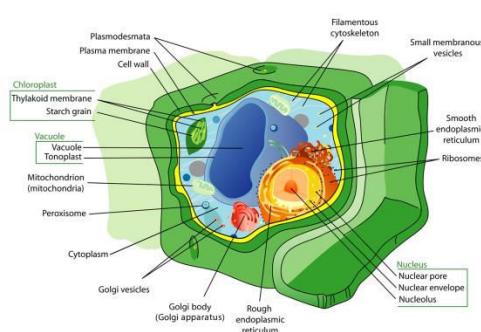

cyanobacterium

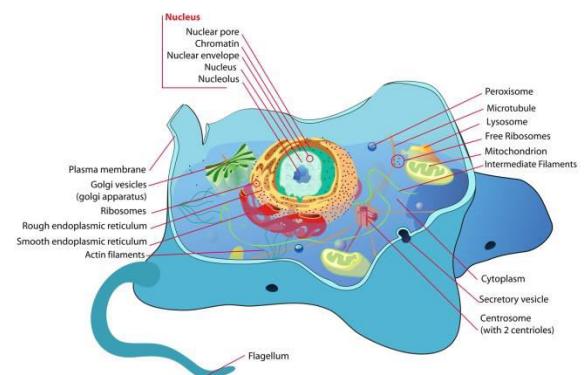

Observe the four figures A, B, C and D for the details and identify which one is an eukaryotic plant cell, an eukaryotic animal cell, a prokaryotic cell (autotroph) and a prokaryotic cell (heterotroph). Fill the correct words into the box below.

A.	
B.	
C.	
D.	

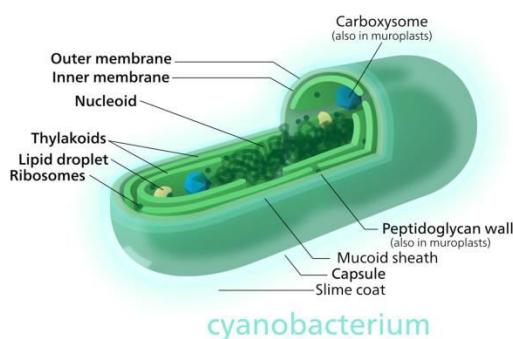

### Answers:

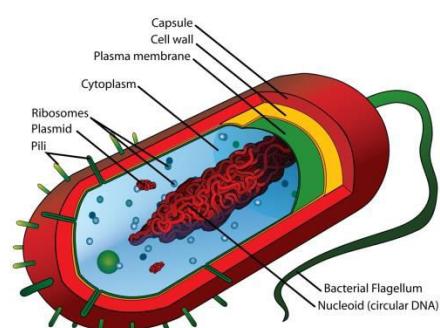

**Eukaryotic Plant Cell**

**Eukaryotic Animal Cell**

**Prokaryotic (Autotroph) Cell**

**Prokaryotic (Heterotroph) Cell**

### Explanation:

Photograph A: Eukaryotic plant cell - Cell wall, well defined nucleus, large vacuole and chloroplast present.

Photograph B: Eukaryotic animal cell - Cell wall, chloroplast and large vacuole absent. Contents of the cell are bounded by plasma membrane. Well defined nucleus and mitochondria present.

Photograph C: Prokaryotic autotroph - Cell wall present, well defined nucleus and double membrane bound organelles absent.

Nucleoid (= nucleus, which is not well defined) and chromophores (= plastid which is not well defined) are present.

Photograph D: Prokaryotic heterotroph - Cell wall present, well defined nucleus and double membrane bound organelles absent.

Nucleoid and mesosomes (=Mitochondria) are present. Chromophore absent.

**Note for the teacher:** Teacher can prepare sets of photographs/ pictures/ specimens of members (plants/animals) belonging to different groups and ask the students to distinguish.
