S.No.	Area	Content
1	Topic	Major Lakes
2	Subject	Geography
3	Topic connected which area of subject?	Drainage
4	Class/ Level	IX
5	Objective	<ul style="list-style-type: none"> To make students aware about location of different types of lake i.e. natural and human made in India. Familiarise students with web portal School Bhuvan NCERT for better understanding of spatial distribution of Lakes in India.
6	Summary	<p>India has many lakes. These are different each other in size and other characteristics. Most lakes are permanent; some contain water only during rainy season. There are some lakes which are the result of the action of glaciers and ice sheets , while the others have been formed by wind, river action ,and human activities. Most of the fresh water lakes are in the Himalayan region. These are formed due to glacial action and are called natural lakes. Besides, the damming of the rivers for the generation of hydel power has also led to the formation of Lakes such as Nagarjun Sagar Lake. You are ware that Lakes are of great value to human beings. Under these activities, on an interactive map of India with the click of mouse you will be able to locate various lakes on the map of India. Name and Visual of Lakes will appear simultaneously. Apart from that, in an another activity you have to identify formation of Lakes due to</p>

		Natural or Human Made factor.
