*Jaunsari* woman from Uttarakhand

Farmer in the North Indian plains with tractor, tubewells and pumpsets

Look at these two images .The first picture is of a *Jaunsari* woman from Uttarakhand and she is standing on the path leading to her village located in the valley. You can notice the terraced farms and a small stream in the background. In the other picture you can see a farm near a village in northern plains of India. Here also you can see some people performing agricultural activities with some modern equipment.

You can compare the two areas on the basis of their farming style, water source, agricultural tools, settlement types and transportation. Imagine yourself to be living in one of these areas and think about all the advantages and disadvantages that you might have.
